Position: programmer/bioinformatician in the mass spectrometry group

Department: Laboratory of Structural Biology and Cell Signalling

Description:

We are looking for a programmer who will help us to develop software tools for interpretation and integration of structural mass spectrometry data. Advanced level of Java is required. Some additional knowledge of C/C++, Python and VB will be also needed during the project. Background in chemistry and/or mass spectrometry data interpretation is preferred but not mandatory. Must be fluent either in Czech, Slovak or English. We offer two years' position in a young international friendly team, working on an exciting cutting-edge project, access to the high-end and unique MS instrumentation and competitive salary covered by our industrial partner Bruker Daltonics. Start between March and end of May 2023.

Requirements:

Advanced level of Java

Some experience with other programming languages (C/C++, Python, VB – to be discussed)

Fluent either in English, Czech or Slovak (one of the languages is sufficient)

PhD degree in chemistry, physics, mathematics, informatics, or other relevant field advantageous

Offering:

Full time position for two years

Competitive salary

Experience of working with the leading industrial partner

Six-week vacations

Other work related benefits

Modern working environment in Biocev campus near Prague

Please send your applications by email to pnovak@biomed.cas.cz by March 20, 2023.
